I have a message for the office of the red phone 📞📞@@

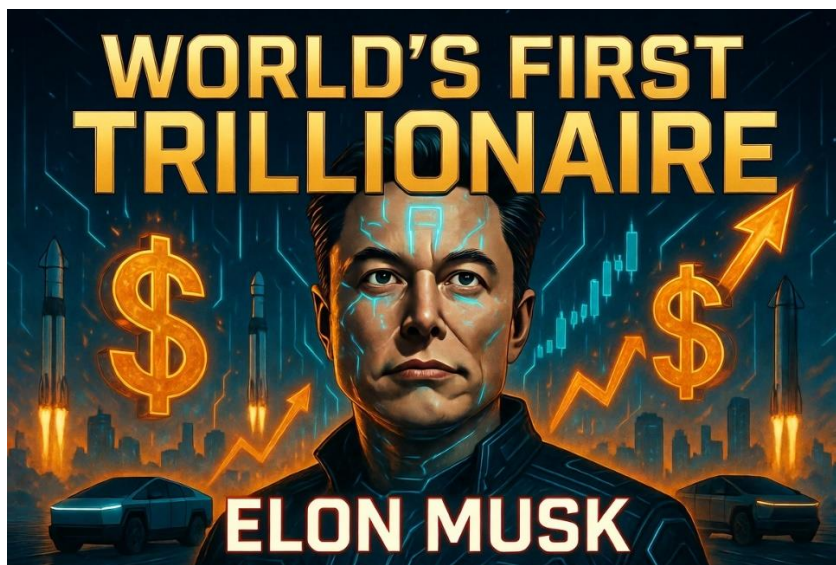

CONGRATULATIONS to Elon on becoming the World's First Trillionaire!

Well deserved. Very well deserved.

YEEE HAW LIL BUDDY!

https://youtu.be/554N_9AxMMc

During Elon's speech at the NASDAQ he made a few points that ressonated very deeply with me. It's one thing to have concerns for the planet, but some people (such as myself and Elon Musk) need something more. They need hope for the future something that gets them excited to wake out of bed in the morning.

He said and I quote that was "the future Space X wants to deliver to **\$YOU**"

YOU includes us Canadians!!!

In the past 6 months I have sent over 2000 applications to various jobs within Space X, Tesla, The Boring Company, and Neuralink. And every last one of them has gone ignored. I suspect due to the fact I am Canadian and Space X THE WORLD'S RICHEST COMPANY! Doesn't sponsor visas to America. None of Elon's ventures do.

Ummm..... why not? Elon is a TRILLIONAIRE now he can afford it!! To say that I am disappointed in Elon would be an understatement. Especially given he was educated here. Yet Canadaian tech talent is invincible to him.

Did you know there is over 1000 software developers in Alberta currently unemployed? Did you know that major game studios are shutting down monthly? Did you know that communists are protesting industry? Every project on the table has a protest attached. Whether it's the ALTO high speed rail in Quebec or the Data Centers Kevin O'Leary is proposing in Utah & Grand Prairie Alberta. Or the Oil Pipelines Danielle Smith want.

SO IM NOT GONNA SIT HERE ANYMORE AND LISTEN TO ANY REJECTION EMAILS FROM AMERICAN COMPANIES TELLING ME IM "NOT QUALIFIED" FOR THE JOB!

I'm going to take this time to tell you how **OVER qualified** I actually am to be working for Elon. I got my hands on a PC at the age of 5 when my father brought it home one day from work. A windows 95 machine.

By the age of 10 I had taught myself **BASIC**. By 12-13 I knew **C++**. I published my first website at the age of 13. I published my first mobile game for Android and iOS when I was 16. I spent 6 years in the Royal Canadian Air Cadets. I was the flight simulator expert

for my squadron and I hold 2 valid pilots licenses with Transport Canada. By 20 I had published 4 mobile games for Android & iOS. I attended the University of Lethbridge for a Bachelor of Computer science for 3 years (never finished) then left to work in Vancouver. I got a job working for a company that was using AI computer vision models to extract license plate numbers of vehicles from a camera in a parking lot. Back in 2018 with technology they developed in 2013.

I published my first game on Steam in 2020. I taught myself Unity and have been using Unity for about 10 years now. I am an expert in Unity which is the number 1 IDE used to develop simulator software. (WINK WINK). Pilot + Software + Unity = EMPLOYABLE AF. So don't reply to this and tell me I'm unqualified. Not until I've spoken with an actual human during an interview who can assess my skills.

In 2024 I was hired as an application developer for Evans Consoles. A company that sells 100K valued desk consoles for industry such as the military, **SPACE TRAVEL**, and Hollywood. Their desks have been used as props in Jurassic World movies for the command center. They have contracts with NASA. I could introduce Elon to the executive team and he could get this product for your Space X offices. Its HIGH QUALITY SHIT! And they already have a record of working with NASA.

Between 2024 – 2025 I attended Lethbridge Polytechnic for Virtual Reality design. I graduated in October top of my class with a perfect 4.0 GPA. Given I have a PERFECT GRADE I DON'T WANT TO HEAR IM NOT QUALIFIED. I'm not interested in your gaslighting!!!

HELL!

I even applied for participation in Neuralink trials because my brain is incredible unique and I think it could be a treasure trove of information for the medical industry. But they never replied to me either. Not 1 single human being working for Elon replied to these unsolicited posts. I guess the future Elon was promising to YOU doesn't include me. Im just invisible...

That's alright though because I've moved beyond seeking work for a paycheck.

I'm a serial entreprenure and over the past year I have created numerous turn key business solutions that only require capital. All the planning, estimation, and community outreach is either already done or in progress. All it it done with the help of AI tools such as Grok. All of it done FOR FREE. My research is #OpenSource and I did it FOR FREE!

https://grok.com/share/c2hhcmQtNQ_bcd8b590-4d2f-4b12-af8b-040e1cfd53f7

I am looking to connect with anyone of the 4400 employees former and or current who are interested in invetsing. I have a treasure chest of investment opportunity up here in Canada if that interests you. I have a 10 BILLION dollar contract on the table for drilling in Alberta. But 1 singular Boring company employee is going to need to respond to my emails first for that to happen...

I'm looking to build a \$110 Million dollar game studio in the town of Olds. There's already a 10 Billion dollar data center proposal on the table. A 1.4 GW facility it would be the largest natural gas plant in the country.

I'm planning a 2.5 Billion dollar underground train network for the province of Alberta. That can also solve the problems created by the ALTO train project in Quebec. I'm planning Microchip & semiconductor facilities in Canmore.

I'm planning an all new MUFON Research lab in the town of St. Paul Alberta + a new 5 acre skatepark property that is alien themed. Im planning a 100 acre amusement park based on the video game franchise Heroes of Might and Magic 5. Already spoke with Tim Pool about the skatepark. I spoke with an executive of Ubisoft about the amusement park who loves the idea.

I am about ready to launch my 6th game on Steam. A digital board game about investing in the stock market. Launching the same week as the historic Space X IPO.

https://store.steampowered.com/app/2095440/Beat_The_Markets/

I will be showcasing the game at Canada's largest gaming convention Games Con Canada next weekend. I will have the opportunity to network with investors about the 110 million dollar game studio idea of mine. Yet all anyone has said yet is no to investing.

So I ask again are there any of the 4400 employees who want to invest?

I have plans for a Dinosaur themed water park in the town of Drumheller. And Elsa/FROZEN themed Disney ski resorts in our rockies. The list of ideas is endless and only growing thanks to the exceptional work of all XAI employees on Grok

<https://grok.com/project/9dcc79ce-2a86-43d9-a62c-5e16a1769c48?tab=conversations>

I also created a new interpretive framework language for communication with the AI. I realized that because AI tokens are based on character count that a new language to reduce the number of characters in a string is required. Or the entire planet's fresh water supply will get spent burning more tokens on more words. As you can tell this document is already way too long and I've just barely scratched the surface of what I need to say.

https://grok.com/share/c2hhcmQtNQ_24d6a085-170c-469a-9d51-b5bc85ad0312

That is why I created **BAC++** a language to communicate with the AI that uses symbols, religious iconography and emoji codes to process requests. The sooner you learn BAC++ the sooner you will unlock the true power of AI. Even though I'm not and have never been an employee of XAI. I am working daily to assist in training your models. I realized that because the AI gets trained on data input from us the consumer. If I gave it just the right data I could train the model too as a non-official employee of the company.

Give it a try. Ask Grok to generate artwork of Mewtwo and to use the reference model trained on register @EX150

I did not like how the mewtwo artwork looked so I gave it 80+ images of what mewtwo actually looked like and now Grok can make perfect images of Mewtwo. Just 1 example of what can be accomplished through the use of BAC++

And for the Love of God would someone please ask Elon Musk about register 69
